Nevada Civil and Criminal Information System

Leading the way to a safer Nevada.

A special edition newsletter providing exciting highlights of new NCJIS Modernization solution features and capabilities. Brought to you by the Nevada Department of Public Safety.

NCJIS Modernization

The **NCJIS Modernization Program** is ushering in a new technological era for Nevada's public safety. New solutions will provide features and capabilities not previously available. Because each solution meets numerous defined requirements, this special edition newsletter highlights the new features and capabilities that are of great interest to our criminal justice community.

NCCIS Portal

The Nevada Civil and Criminal Information System - NCCIS - is a gateway for both civil business and criminal justice users. Just as JLink is the gateway to the current system and information, NCCIS will be the new portal to access the NCJIS system and information. It includes new solutions and functionality for civil business users not previously available in the old system.

The NCCIS Portal is a cloud-based solution which provides a new way of interfacing with criminal justice systems and supports more features, capabilities, and reliable access. It is based on an industry standard, NIEM XML. The NCCIS Portal will be accessible through any web browser.

Features and Capabilities

- Provides time savings to users and reduces number of logons.
- Offers reliable and easy access to background checks, criminal history, and documentation to those with authorized access.
- Supports mobile access to DPS applications.
- Uses any web browser through the State's SilverNet connection.
- Manages access and will contain advanced search features to allow information to be retrieved from across systems, including within documents.

Law Enforcement Message Switch - LEMS

The new Law Enforcement Message Switch (LEMS) will provide rich functionality with high performance, reliability, and security, offering a new way of performing inquiries on NLETS, NCIC, and State records—a great time-saving benefit.

Features and Capabilities

- Supports both legacy and standards-based modern interfaces, including NIEM XML and web services.
- Uses the eAgent 2.0 user interface (UI) screen to enter and display query data. All inquiries, entering, modifying, or cancelling happens in eAgent screens delivered though LEMS.
- Provides robust database-search capabilities.
- Allows for saving and assigning drafts without limit.
- Provides the ability to use a smart key to run a query or to use a template without the use of a mouse.
- Provides the ability to perform the new Railroad Crossing Query (RCQ) for geospatial coordinates, operating company, emergency contact phone numbers, and other details.

NCJIS/NCIC Validations

The present JLink Validation System will no longer be supported. There will be a complete changeover to a new validation system that is still in design. More information will be provided after design, but here are some attributes to expect.

Features and Capabilities

- New solution should take less time to complete validations.
- Will include all current functionality.
- The goal is for the process to be less convoluted.

Warrants/Wanted Persons

The new Warrant Hot File provides a new design that is web-accessible and user-friendly.

Features and Capabilities

- New design will provide more efficient warrant processing functionality.
- All warrants will be saved in the State system, with the option of a copy to be forwarded to NCIC.
- Investigative interest capability will be added to the state warrant system.
- Users can query other participating states for warrants (SWQ).
- Links to help files will be available.

NCJIS Certification Testing

NCJIS certification testing is now available online on the nexTEST platform, providing both time- and cost-saving benefits for criminal justice agencies and civil businesses across the state.

Features and Capabilities

- One-the-job audio and video training materials available 24/7/365.
- Intuitive user interface.
- Increased flexibility for each person's time and schedule to meet the certification deadline.

Background Checks

Functionality for background checks will be changing and expanded. Here are some new attributes to expect.

Features and Capabilities

- National Instant Criminal Background Check System (NICS) Disposition of Firearms background checks will be available to evidence vaults.
- Concealed Carry Weapon (CCW) will be automated with the new system.
- Law enforcement fingerprint submission for civil purposes will be returned electronically.

The NCJIS Program Team's top priority is to provide constant communication and gain important feedback from our valued stakeholders.

Need help or additional information? Call the new NCJIS Moderation Customer Service phone number: 775-687-7263

With great appreciation from the NCJIS program management team.
